### LED-Scanner CPS 200

The products to be recorded can be fed on multiple tracks into a LED camera system, which individually measures and then weighs them at a weighing station.

Based on the captured data, the highest yield and minimal give-away is guaranteed during slicing of pieces/chunks and slices.

- \_ Open design, simple handling
- \_ High fault tolerance
- \_ Excellent detection of products with extremely fluctuating color contrasts
- \_ Precise measurement even in extraneous light

### ***Explanatory / product film for a sensor interface***

We need a factual voice for an explanatory / product film about a sensor interface.

Wouldn't it be great if you could connect sensors from different manufacturers and manage, control and read them all in one app?

Do you also value the highest level of data security?

With the gamma magic cube developed by us, you can control your sensors centrally.

The Gamma Rubik's Cube is the mediator between all smart devices. Regardless of the area of application and with unlimited possibilities.

Whether 1 or 100,000 sensors - any number of sensors can be controlled and managed with the Gamma Rubik's Cube.
